

Imperium® Lube Oil Tanks | Pump Kit Selector

All Imperium® Lube Oil Tanks are supplied with a top suction port — so a pump is essential for oil withdrawal.
Select from five purpose-built air-operated kits to match your oil type, working range, and level of dispensing precision required.

5 Pump Kit Options	Description	Typical Use Case	Benefits to Workshop	Dispensing Control	Cleanliness	Practical Notes
Bare Tank (No Pump)	Bunded steel tank with removable fittings plate and top suction tube (no pump, hoses, or nozzle)	For sites that already have a central air-driven or electric oil distribution system	Robust, compliant & ready for connection to existing system	Depends on customer's existing system	Fully bunded and sealed, zero leakage risk	Not suitable for manual withdrawal. No bottom outlet — oil cannot be accessed w/o a pump.
<u>Pump Kit 1 – PUM.AOP.1:1-BARE</u>	1:1 air-operated oil pump & regulator (no hoses/nozzle)	Entry-level air pump for light oils and short delivery distances	Affordable starting point; removes need for gravity or jug methods	Basic air-triggered delivery	Cleaner than manual pour; depends on separate hose	Customer must supply their own hose/nozzle.
<u>Pump Kit 2 – PUM.AOP.3:1-BARE</u>	3:1 air-operated pump & regulator (no hoses/nozzle)	Medium-viscosity oils, moderate delivery runs	Higher pressure and flow than 1:1; suits mid-viscosity lube oils	Smooth, steady flow	Cleaner and faster than manual transfer	Requires separate dispensing gun or reel.
<u>Pump Kit 3 – PUM.AOP.5:1-BARE</u>	5:1 air-operated pump & regulator (no hoses/nozzle)	High-viscosity oils or longer hose runs	Strong pressure for thick lubricants; reliable long-line feed	Consistent high-pressure flow	Clean dispensing when paired with suitable gun	For professional setups with existing delivery infrastructure.
<u>Pump Kit 4 – PUM.AOP.1:1-3M</u>	1:1 air pump with 3 m hose & Digital Nozzle (flow-metered)	Compact workshops or single-bay service areas	Self-contained solution — no jug, no contraption	Digital litre-by-litre control on nozzle	Drip-free, includes tray; clean floor area	Excellent for precise top-ups close to tank location.
<u>Pump Kit 5 – PUM.AOP.3:1-15MR</u>	3:1 air pump with 15 m hose reel & Digital Nozzle (flow-metered)	Medium-sized or two-bay workshops	Professional dispensing package with tidy hose management	Digital readout ensures accurate fill volumes	Enclosed reel prevents leaks and tripping hazards	Reach of ~13 m practical; covers one to two bays depending on layout.

Summary

- **Tank Only, No pump** → Storage-only to which you can attach the workshop's own pump, and lube oil dispensing system
- **Pump Kits 1–3** → Performance tiers for workshops with existing hose systems
- **Pump Kits 4–5** → Fully integrated, precision-dispensing solutions — no external equipment required
